

Career info

Myself Sharon Dev Saseendran and I am a male software developer currently looking for roles in software engineering. As a seasoned developer with more than 3 years of industry experience working in top techs like Microsoft, I firmly believe that I should be able to draw considerable impact working as part of your team at *Arcadis*. I am always open to take up new engineering challenges with a growth mindset and contribute to the business of the organization.

I started my career at Microsoft as a customer success engineer for our Microsoft premier customers, conducting workshops, change management and maintenance of Azure AD and M365 PaaS platforms. Even though I was constantly learning and adapting towards handling premier clients in this client facing role, my true passion was with software engineering. So, I quit Microsoft and joined a startup as a research software engineer. There I worked mostly on POCs and internal products.

Talking about my software engineering experience, in my last company I worked on two products, where I was the lead engineer working on **a conversational search engine and a product recommendation system for ecommerce platforms**. The Conversational search engine integrates with any enterprise website as a semantic chatbot and drives customer interaction. The concept was to allow customers to have a more personalized experience while interacting with a chatbot based on their website knowledgebase, instead of a Question and Answer model with limited responses. Furthermore, I also received opportunities to work on an internal product, a product recommendation solution, scraping product data from different ecommerce websites and comparing them using cosine similarity. The concept was to suggest **product recommendations based on image and textual information on a particular target product the user may be interested in**. I collaborated with multiple teams, including leading the web scraping for product data, creating the Flask web app for computing the similarity between products and was also involved in building the admin portal for the platform in ReactJS.

I hope that my engineering experience and growth mindset will be a great value addition to your team and I look forward to the possibility of discussing how I can support your team as an intern.

Regards.

Sharon Dev Saseendran

Sharon Dev Saseendran

Buffalo, NY | hello-sharon.dev | ssaseend@buffalo.edu | +1 (716) 573 9185

SKILLS

Languages: Java EE · Python · JS · SQL

MLOps: PyTorch · LangChain · Hugging Face · Pinecone

Technologies: Flutter · Flask · Spring Boot · FastAPI · PostgreSQL · ElasticSearch · Redis · Azure · GCP

WORK EXPERIENCE

University at Buffalo, SUNY

Jan 2025 – Present | Buffalo, NY

Graduate Research Assistant — 3D Human Modeling

Transformer | Pytorch

- Collaborating with Prof. Ifeoma and researcher Lu Dong to benchmark **FLAME** and **SMPL-X** parametric models on the DAiSEE affect-recognition dataset.
- Engineered an **VideoAffectTransformer** pipeline that uses **655-D** tensor combining extracted 3D features from EMOCA-Inferno & OSX models on 60 key-frames/clip from DAiSEE dataset and leverage multi-head classifier to predict Engagement, Boredom, Confusion (**70.1%**) and Frustration (**78.2%**)—surpassing single-model baselines.

UST Global

Jan 2024 - July 2024 | Bangalore, India

Developer 1

Flutter | FlutterFlow

- Delivered a front-end cross-platform mobile app for a UK-based mortgage company, scaling from MVP to production for an estimated user base of **65k+** in record time (**30%** ahead of schedule).
- Implemented app launch animations and custom widgets, reducing UI latency by **45%** and improving TTI by **1.8s**.
- Integrated Equifax credit score dashboards used by over **60% of daily active users** to assess mortgage eligibility, reducing drop-off during pre-approval flow by 35%.
- Worked towards achieving 85% crash-free sessions in Android and iOS post-release through proactive optimization and Flutter performance profiling with GA and FlutterFire.

Moonraft Innovation Labs (acquired by UST)

Feb 2023 - Dec 2023 | Bangalore, India

Software Engineer (Digital Experience)

Spring Boot | Flask | ElasticSearch | Pinecone | ETL | MongoDB

- Built a plug-and-play semantic search module for corporate websites, cutting information retrieval time by **60%** for **500+ users**.
- Deployed a Spring Boot backend that supported upto **20 concurrent scraping/indexing jobs daily**, with retry mechanisms and job monitors for uninterrupted data flow.
- Built an intuitive admin UI to trigger and track ETL workflows for site updates, enabling reduced **setuptime of the website indexing as low as 2-3 days**.
- Contributed to the DL Vision team of a Product Comparison Engine for ecommerce platforms, generating embedding for over 50K products for similarity-based search across multiple ecommerce brands.
- Led a 3-member ETL team to scrape, clean and enrich **50K+** product listings.

Microsoft

Aug 2021 - Feb 2023 | Hyderabad, India

CSA-Engineering

Microsoft Intune | Azure AD | MECM | Microsoft Defender

- SME for Microsoft Intune, Azure AD, and MECM, helping 70+ enterprise clients manage and secure over **200K+ endpoints**.
- Responsible for training, advisory, and building POCs for premier customers on M365 and Azure.
- Trained 100+ engineers in Microsoft security practices, boosting client-side resolution rate by **15%**.

EDUCATION

University at Buffalo, State University of New York

New York, United States

Masters in Computer Science (Specialization in AI/ML)

August 2024 - present

Cumulative GPA: 3.75/4

Relevant Coursework: Machine Learning · Deep Learning · Data Modeling and Query Language · Algorithms

Cochin University of Science and Technology, School of Engineering

Kerala, India

Bachelor of Technology in Electronics and Communication

June 2017 - May 2021

Cumulative GPA: 9.36/10

Relevant Coursework: Computer Architecture · Object Oriented Programming · Embedded Systems · Discrete Mathematics
